AgriSoko Pocket G11 - Project Report

Group G11 | Version 1.0.0 | Repository: cxnisme/agrisoko-pocket-g11 | 23 October 2026

Project overview

AgriSoko Pocket G11 is an Expo/React Native Android application paired with a FastAPI member lookup service. It supports task-based member lookup, explainable profile matching, and a persistent offline fallback. The directory presents GitHub usernames and assigned task areas.

Team leadership and authorship

This is our group project, led by Christian (cxnisme) as group leader. Christian developed and integrated the project with assistance from an AI coding assistant for implementation, focused tests, code review, and documentation. Project direction and integration decisions were led by the group leader.

System design

The mobile client uses typed bottom-tab navigation, query validation, request timeouts, source badges, and persistent AsyncStorage caching for the directory, profiles, and successful queries. When the API cannot be reached, it uses bundled task records and local token matching. The API exposes health, model-info, member-directory, profile, and ask endpoints. Matching uses deterministic TF-IDF/cosine-style term weighting with exact name and alias boosts plus confidence and margin checks.

Validation performed

Area	Check	Recorded result
Backend	python -m pytest -q (Python 3.12)	13 passed
Mobile	npm test	7 passed
Mobile	npm run typecheck	Passed
Expo	npx expo install --check	Dependencies up to date
Expo	npx expo-doctor	18/18 checks passed
Android bundle	npx expo export --platform android	Succeeded

Release and evidence status

The EAS Android build 51746a29-700a-438c-b3eb-3357ddd7fd9a is queued. The APK, physical-device validation, demo recording, external user feedback, and member profile confirmations are not included in the current package. The API deployment URL is not configured; EXPO_PUBLIC_API_URL can point to a hosted HTTPS service, while bundled records support local lookup.

Submission structure

The COMBO_A3_G11 package contains the README, mobile client, AI API, project report, contribution and review record, automated test log, feedback status, and AI-use disclosure. The APK and demo recording will be added when those deliverables are available.
